

Appl. No. 10/736,139
Response dated Dec. 12, 2005
Regarding Office Action dated Aug. 11, 2005
Docket No. BOC9-2003-0085 (456)

This following is a listing of claims pending in the instant application:

LISTING OF CLAIMS

1. (Currently Amended) A method of automatically resolving a Digital Subscriber Line failure comprising:
 - detecting a failure of the Digital Subscriber Line;
 - establishing a call over a public switched telephone network with an administrative system for the Digital Subscriber Line; [[and]]
 - notifying the administrative system for the Digital Subscriber Line of the failure over the established call, whereby the administrative system causes the Digital Subscriber Line to be reset;
 - storing in a data store connected to the administrative system at least one of notification information received by the administrative system and information generated by the administrative system relating to a course of action implemented by the administrative system in response to the notifying step; and
 - sending a message informing a subscriber to the Digital Subscriber Line of when resumption of service over the Digital Subscriber Line is expected.
2. (Original) The method of claim 1, said notifying step further comprising requesting the reset of the Digital Subscriber Line.
3. (Original) The method of claim 1, further comprising the administrative system identifying the Digital Subscriber Line with the failure using caller identification on the received call.

Appln. No. 10/736,139
Response dated Dec. 12, 2005
Regarding Office Action dated Aug. 11, 2005
Docket No. BOC9-2003-0085 (456)

4. (Original) The method of claim 3, further comprising the administrative system sending a reset message to a modem within a Digital Subscriber Line operation center, wherein the modem is associated with the Digital Subscriber Line with the failure.

5. (Original) The method of claim 4, further comprising:
the administrative system establishing a telephone call with a subscriber endpoint associated with the Digital Subscriber Line with the failure; and
providing information relating to the failure of the Digital Subscriber Line to the subscriber endpoint over the established telephone call.

6. (Currently Amended) A system for automatically resolving a Digital Subscriber Line failure comprising:

means for detecting a failure of the Digital Subscriber Line;

means for establishing a call over a public switched telephone network with an administrative system for the Digital Subscriber Line; [[and]]

means for notifying the administrative system for the Digital Subscriber Line of the failure over the established call, whereby the administrative system causes the Digital Subscriber Line to be reset;

means for storing in a data store connected to the administrative system at least one of notification information received by the administrative system and information generated by the administrative system relating to a course of action implemented by the administrative system in response to the notifying step; and

means for sending a message informing a subscriber to the Digital Subscriber Line of when resumption of service over the Digital Subscriber Line is expected.

7. (Original) The system of claim 6, said means for notifying further comprising means for requesting the reset of the Digital Subscriber Line.

Response dated Dec. 12, 2005
Regarding Office Action dated Aug. 11, 2005
Docket No. BOC9-2003-0085 (456)

8. (Original) The system of claim 6, further comprising means for the administrative system to identify the Digital Subscriber Line with the failure.

9. (Original) The system of claim 8, further comprising means for the administrative system to send a reset message to a modem within a Digital Subscriber Line operation center, wherein the modem is associated with the Digital Subscriber Line with the failure.

10. (Original) The system of claim 9, further comprising:
means for the administrative system to establish a telephone call with a subscriber endpoint associated with the Digital Subscriber Line with the failure; and
means for providing information relating to the failure of the Digital Subscriber Line to the subscriber endpoint over the established telephone call.

11. (Currently Amended) A machine readable storage, having stored thereon a computer program having a plurality of code sections executable by a machine for causing the machine to perform the steps of:

detecting a failure of a Digital Subscriber Line;
establishing a call over a public switched telephone network with an administrative system for the Digital Subscriber Line; [[and]]
notifying the administrative system for the Digital Subscriber Line of the failure over the established call, whereby the administrative system causes the Digital Subscriber Line to be reset;

storing in a data store connected to the administrative system at least one of notification information received by the administrative system and information generated

by the administrative system relating to a course of action implemented by the administrative system in response to the notifying step; and
sending a message informing a subscriber to the Digital Subscriber Line of when resumption of service over the Digital Subscriber Line is expected.

12. (Original) The machine readable storage of claim 11, said notifying step further comprising requesting the reset of the Digital Subscriber Line.

13. (Original) The machine readable storage of claim 11, further comprising the administrative system identifying the Digital Subscriber Line with the failure using caller identification on the received call.

14. (Original) The machine readable storage of claim 13, further comprising the administrative system sending a reset message to a modem within a Digital Subscriber Line operation center, wherein the modem is associated with the Digital Subscriber Line with the failure.

15. (Original) The machine readable storage of claim 14, further comprising:
the administrative system establishing a telephone call with a subscriber endpoint associated with the Digital Subscriber Line with the failure; and
providing information relating to the failure of the Digital Subscriber Line to the subscriber endpoint over the established telephone call.

16. (Original) A Digital Subscriber line modem configured to detect a failure in a Digital Subscriber Line and place an outgoing call over a public switched telephone network to an administrative system of the Digital Subscriber Line to notify the administrative system of the failure.
